

(P) Preparation	(I) Identification	(C) Containment
<div><div><div>1. Patch asset vulnerabilities</div><div>2. Perform routine inspections of controls/weapons</div><div>3. Maintain Antivirus/EDR application updates</div><div>4. Create network segmentation</div><div>5. Log traffic between network segments</div><div>6. Incorporate threat intelligence</div><div>7. Perform routine inspections of asset backups</div><div>8. Conduct user security awareness training</div><div>9. Conduct response training (this PBC)</div><div>10. Limit permissions so that users and user groups cannot create tokens [2]</div><div>11. Administrators should log in as a standard user but run their tools with administrator privileges using the built-in access token manipulation command runas [2]</div><div>12. An adversary must already have administrator level access on the local system to make full use of this technique; be sure to restrict users and accounts to the least privileges they require [3]</div></div></div>	<div><div><div>1. Monitor for:<div><div>a. changes made to AD settings that may modify access tokens to operate under a different user or system security context to perform actions and bypass access controls [4]</div><div>b. executed commands and arguments for token manipulation by auditing command-line activity. Specifically, analysts should look for use of the runas command. Detailed command-line logging is not enabled by default in Windows [5]</div><div>c. API calls, loaded by a payload, for token manipulation only through careful analysis of user network activity, examination of running processes, and correlation with other endpoint and network behavior. There are many Windows API calls a payload can take advantage of to manipulate access tokens [6]</div></div></div><div>2. Investigate and clear ALL alerts associated with the impacted assets or accounts</div><div>3. Routinely check firewall, IDS, IPS, and SIEM logs for any unusual activity</div><div>4. Query systems for process and thread token information and look for inconsistencies such as user owns processes impersonating the local SYSTEM account [6]</div></div></div>	<div><div><div>1. Inventory (enumerate &amp; assess)</div><div>2. Detect   Deny   Disrupt   Degrade   Deceive   Destroy</div><div>3. Observe -&gt; Orient -&gt; Decide -&gt; Act</div><div>4. Issue perimeter enforcement for known threat actor locations</div><div>5. Archive scanning related artifacts such as IP addresses, user agents, and requests</div><div>6. Determine the source and pathway of the attack</div><div>7. Fortify non-impacted critical assets</div></div></div>
(E) Eradication	(R) Recovery	(L) Lessons/Opportunities
<div><div><div>1. Close the attack vector by applying the Preparation steps listed above</div><div>2. Perform endpoint/AV scans on targeted systems</div><div>3. Reset any compromised passwords</div><div>4. Inspect ALL assets and user activity for IOC consistent with the attack profile</div><div>5. Inspect backups for IOC consistent with the attack profile PRIOR to system recovery</div><div>6. Patch asset vulnerabilities</div></div></div>	<div><div><div>1. Restore to the RPO (Recovery Point Objective) within the RTO (Recovery Time Objective)</div><div>2. Address any collateral damage by assessing exposed technologies</div><div>3. Resolve any related security incidents</div><div>4. Restore affected systems to their last clean backup</div></div></div>	<div><div><div>1. Perform routine cyber hygiene due diligence</div><div>2. Engage external cybersecurity-as-a-service providers and response professionals</div><div>3. Implement policy changes to reduce future risk</div><div>4. Utilize newly obtained threat signatures</div><div>5. Remember that data and events should not be viewed in isolation but as part of a chain of behavior that could lead to other activities</div></div></div> <div><div>References:<div><div>1. <a href="https://attack.mitre.org/techniques/T1134/">https://attack.mitre.org/techniques/T1134/</a></div><div>2. <a href="https://attack.mitre.org/mitigations/M1026/">https://attack.mitre.org/mitigations/M1026/</a></div><div>3. <a href="https://attack.mitre.org/mitigations/M1018/">https://attack.mitre.org/mitigations/M1018/</a></div><div>4. <a href="https://attack.mitre.org/datasources/DS0026/">https://attack.mitre.org/datasources/DS0026/</a></div><div>5. <a href="https://attack.mitre.org/datasources/DS0017/">https://attack.mitre.org/datasources/DS0017/</a></div><div>6. <a href="https://attack.mitre.org/datasources/DS0009/">https://attack.mitre.org/datasources/DS0009/</a></div></div></div></div>
