

CIRT Playbook Battle Card: **GSPBC-1064 - Persistence - Event Triggered Execution**

(P) Preparation	(I) Identification	(C) Containment
<ul style="list-style-type: none"><li>1. Patch asset vulnerabilities</li><li>2. Perform routine inspections of controls/weapons</li><li>3. Maintain Antivirus/EDR application updates</li><li>4. Create network segmentation</li><li>5. Log traffic between network segments</li><li>6. Incorporate threat intelligence</li><li>7. Perform routine inspections of asset backups</li><li>8. Conduct phishing simulations</li><li>9. Conduct user security awareness training</li><li>10. Conduct response training (this PBC)</li></ul>	<ul style="list-style-type: none"><li>1. Monitor for:<ul style="list-style-type: none"><li>a. Suspicious configurations on the local system such as newly constructed files or WMI objects, modified registry keys, or unrecognized DLL activity <sup>[1]</sup></li><li>b. Creation or modification of cloud-based function and workflow monitoring services <sup>[3]</sup></li></ul></li><li>2. Investigate and clear ALL alerts associated with the impacted assets or accounts</li><li>3. Routinely check firewall, IDS, IPS, and SIEM logs for any unusual activity</li><li>4. Utilize Sysinternals Autoruns to view programs configured to run in response to startup or application execution <sup>[2]</sup></li></ul>	<ul style="list-style-type: none"><li>1. Inventory (enumerate &amp; assess)</li><li>2. Detect   Deny   Disrupt   Degrade   Deceive   Destroy</li><li>3. Observe -&gt; Orient -&gt; Decide -&gt; Act</li><li>4. Issue perimeter enforcement for known threat actor locations</li><li>5. Archive scanning related artifacts such as IP addresses, user agents, and requests</li><li>6. Determine the source and pathway of the attack</li><li>7. Fortify non-impacted critical assets</li></ul>
(E) Eradication	(R) Recovery	(L) Lessons/Opportunities
<ul style="list-style-type: none"><li>1. Close the attack vector by applying the Preparation steps listed above</li><li>2. Perform endpoint/AV scans on targeted systems</li><li>3. Reset any compromised passwords</li><li>4. Inspect ALL assets and user activity for IOC consistent with the attack profile</li><li>5. Inspect backups for IOC consistent with the attack profile PRIOR to system recovery</li><li>6. Patch asset vulnerabilities</li></ul>	<ul style="list-style-type: none"><li>1. Restore to the RPO (Recovery Point Objective) within the RTO (Recovery Time Objective)</li><li>2. Address any collateral damage by assessing exposed technologies</li><li>3. Resolve any related security incidents</li><li>4. Restore affected systems to their last clean backup</li></ul>	<ul style="list-style-type: none"><li>1. Perform routine cyber hygiene due diligence</li><li>2. Engage external cybersecurity-as-a-service providers and response professionals</li><li>3. Implement policy changes to reduce future risk</li><li>4. Utilize newly obtained threat signatures</li><li>5. Avoid opening email and attachments from unfamiliar senders</li><li>6. Avoid opening email attachments from senders that do not normally include attachments</li><li>7. Pay attention to unusual behavior exhibited by trusted parties</li><li>8. Remember that data and events should not be viewed in isolation but as part of a chain of behavior that could lead to other activities</li></ul> <div><b>References:</b><ul style="list-style-type: none"><li>1. <a href="https://attack.mitre.org/techniques/T1546/">https://attack.mitre.org/techniques/T1546/</a></li><li>2. <a href="https://learn.microsoft.com/en-us/sysinternals/downloads/autoruns">https://learn.microsoft.com/en-us/sysinternals/downloads/autoruns</a></li><li>3. <a href="https://attack.mitre.org/datasources/DS0025/">https://attack.mitre.org/datasources/DS0025/</a></li></ul></div>
